Multi couplings

are tools used to connect and disconnect hydraulic and electrical systems simultaneously. Connection and disconnection are performed with a simple and quick movement, which allows the operator to save time and increase work safety.

Multi couplings are equipped with „flat face" quick connectors which reduce the risk of introducing dirt into the circuit, leaks, and air intrusion when connecting or disconnecting quick couplings. STUCCHI offers a wide range of multi couplings for industry

SERIES: GR-DP
multi-connectors interchangeable only with STUCCHI quick couplings

Main use:
- Mobile construction equipment
- Drilling equipment
- Vehicles
- Industrial equipment
- Agricultural equipment

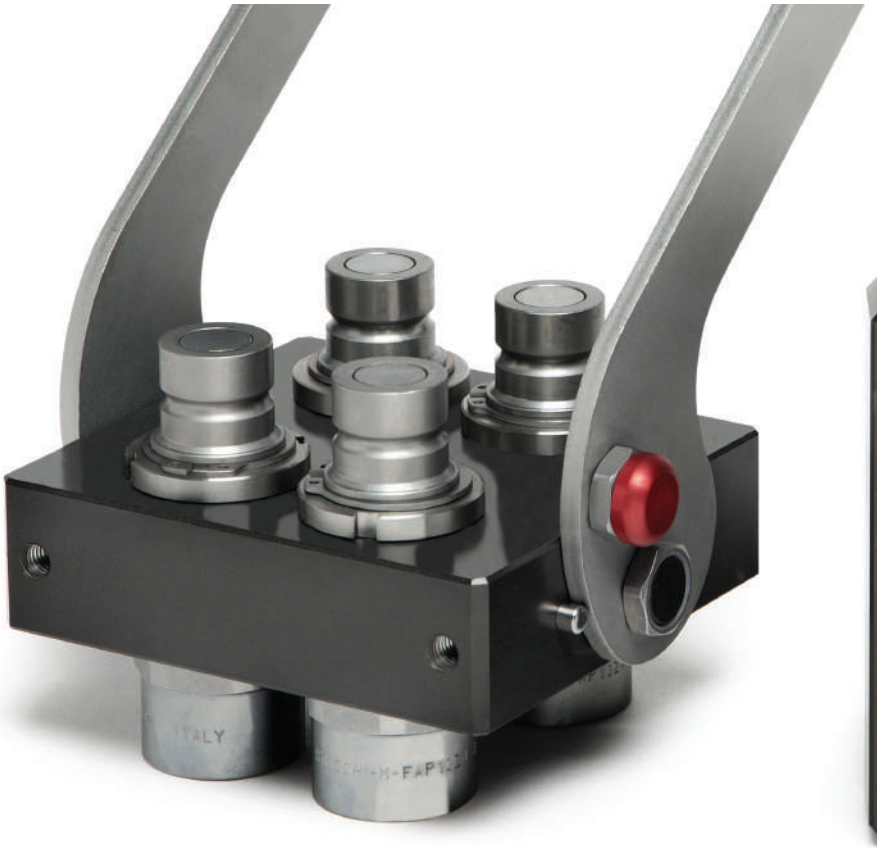

GR-DP are mechanical multi-connectors offering a wide range of solutions for any application requiring connection and disconnection of several hydraulic and electrical lines at one time.

Stucchi®

HYDRO

GR-DP Up to ten lines can be simultaneously connected and disconnected by a safe, simple and quick movement.

Benefits of using
multi couplings:

- ☑ Quick connection and disconnection of up to ten hydraulic, electrical and pneumatic lines without any risk of incorrect connection of the lines.
- ☑ Flat face couplings: Easy to clean avoiding contamination of circuit.
  No fluid loss to the environment.
- ☑ Couplings mounted on the plates with threaded sleeves or seeger/snap rings for easy installation or replacement.
- ☑ Using FAP couplings with a triple valve system, it is possible to connect and disconnect with high residual pressure in the circuit.
- ☑ Possibility to fit electrical connector for electronic control system on the equipment.
- ☑ The safety lock on the handle allows a single-hand operation.
- ☑ Compact design.
